Propose Materialities

Leadership team prepares to make decisions based on data accumulated during the process.

2 min
–
2 hours

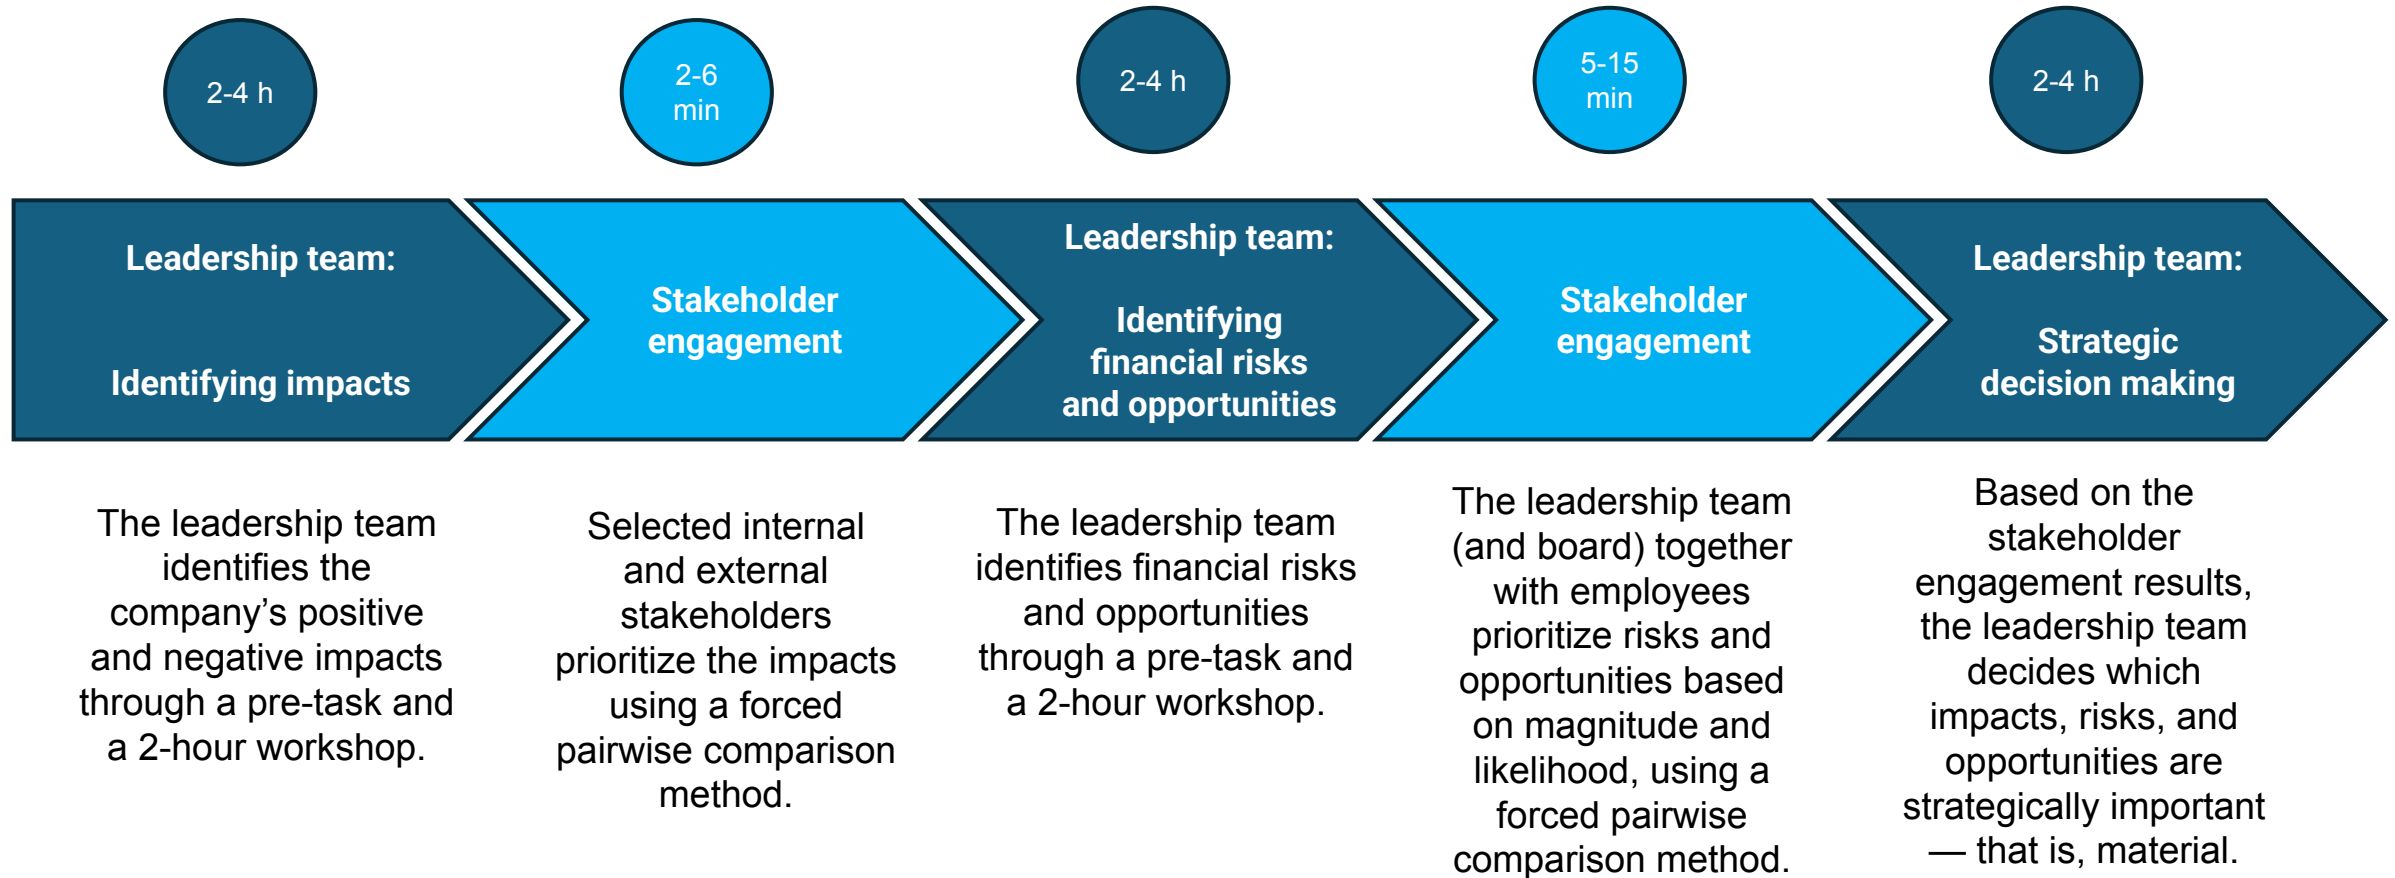

Workshop 3 **Materialities**

Validate Materialities

Process owner helps the leadership team make evidence-informed decisions on which impacts, risks and opportunities are strategic aka material.

2 min
–
2 hours

DMA process

DMA in a nutshell

Double Materiality Assessment is a **Strategic analysis by the CEO and leadership team**.

Helped by the process owner the leadership team and selected stakeholders work together to propose, purify and prioritise impacts, risks and opportunities.

The outcomes:

1. A list of strategic impacts, financial risks, and opportunities, ready for operative planning
2. More cohesive leadership team, ready to lead together
3. More committed employees, ready to take action
4. DMA audit trail, ready to be audited

With **ExecutESG's process software**, the Double Materiality Assessment (DMA) becomes **inclusive, fast, and repeatable**.

ExecutESG DMA ensures compliance with sustainability reporting requirements – **without unnecessary noise or bureaucracy**.

The company's **value and competitiveness increase** when ExecutESG's DMA process software is embedded into continuous use.

1 SaaS

ExecutESG - DMA

With ExecutESG DMA SaaS you plan and execute your Double Materiality Assessment (DMA) as an integral part of strategic decision-making.

The software guides the process owner and leadership team step by step through the DMA, supporting three workshop implementations, stakeholder engagement, communication, and decision-making.

Our evolving AI module acts as a partner, helping to categorize impacts, risks, and opportunities into sustainability topics, while also assessing scope and irreversibility.

DMA is an excellent analytical tool for creating, sharpening, or refining business strategy.

Even if your company is not legally required to conduct a DMA, doing so with a SaaS solution is both sensible and, most importantly, repeatable.

Large companies prefer value chain partners that have completed a DMA. It is a clear signal that even a smaller company's leadership is future-proof and trustworthy.

Alternatives for making DMA		
	Recommended	
Workspace for the process owner Message templates Reports Workshops Stakeholder engagement Impacts, Risks, Opportunities AI Email and phone support	Workspace for the process owner Message templates Reports Workshops Stakeholder engagement Impacts, Risks, Opportunities AI Email and phone support 1st DMA: 10*20-60 min Teams + Whatsapp hotline	Expert from ExecutESG facilitates a DMA process using DMA process software. At the end of the project, a company can purchase the SaaS license.

Strengths

Extensive and effective stakeholder engagement that also strengthens the relationship between the organization and its stakeholders.

Focus on positivity and opportunities. Supporting the organization in identifying its own strengths and clarifying its purpose.

An efficient process model that moves from open reflection to distilled understanding. Helping key people minimize the heaviest workload through AI and participation.

An easy-to-use software that maximizes organizational autonomy while saving time and minimizing costs.

When use ExecutESG DMA?

Annually

ExecutESG DMA provides a clear structure for conducting strategic analysis in collaboration with the leadership team and stakeholders.

Delivering high-quality leadership — repeatably.

Simplicity

During the DMA, the board participates twice to weigh impacts, risks, and opportunities — each time for less than 15 minutes.

Exit approaching

A cost-effective way to improve valuation. The company demonstrates that its strategic decision-making is aligned with sustainability reporting, transparent, and of high quality. Due diligence findings are positive.

Together with the leadership team

In ExecutESG's DMA, every step is documented as the process unfolds. The board gains a clearer picture and is better able to contribute.

New CEO

With ExecutESG DMA, a new CEO gets to know the leadership team and gains control of stakeholder relationships.

Ownership change

A new owner and board ensure that the leadership team collaborates, listens to stakeholders, and makes strategic decisions transparently.

Competitive advantage

The company gains an edge by showing that responsibility is integrated at the strategy level. It can also be a winning factor in tenders.

Compliance – Legal responsibility

The board is accountable for strategy and for considering sustainability. ExecutESG DMA addresses both.

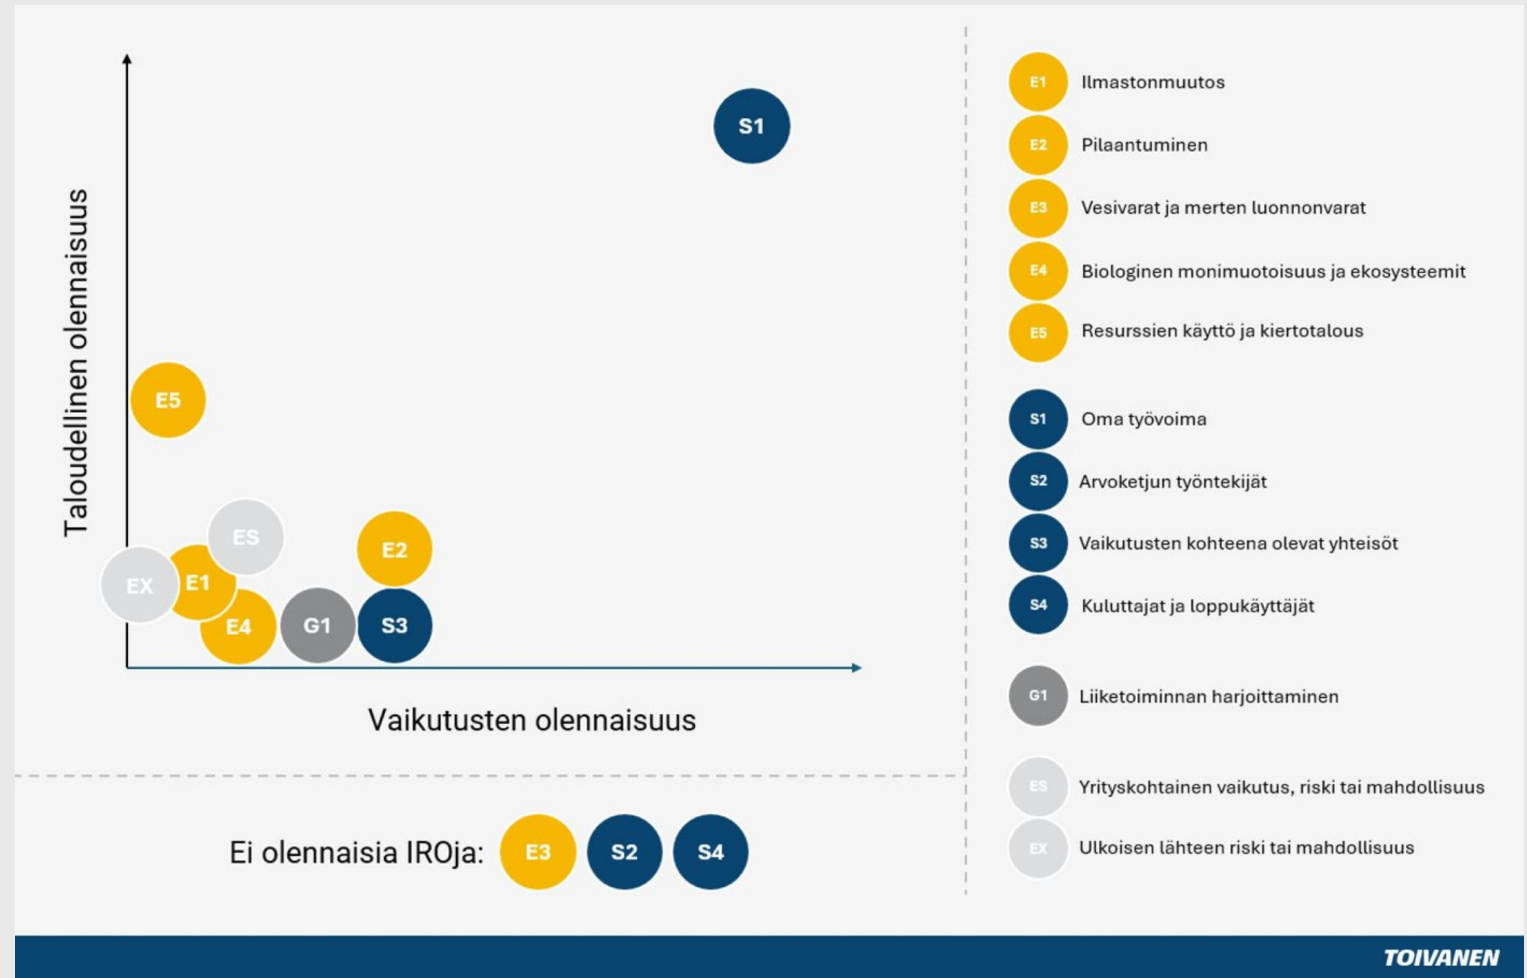

DMA

Stakeholder engagement	Leadership team engagement	Data	Process
- Planned by process owner - Message templates - Respectful tone of voice - Gamified participation - Short answering time - Large stakeholder groups - Priorisation of impacts - Priorisation of risks and opportunities	- Planned and facilitated by process owner - Three pretasks - Three workshops - Priorisation of impacts - Priorisation of risks and opportunities - No access to DMA software needed - ESG jargon not used	- AI used to categorise input proposed by the leadership team and stakeholders - Impacts report - TOP ranking impacts - Comparative XY-visualisation - Table format - Risks and Opportunities report - TOP ranking risks and opportunities - Comparative XY-visualisations - Table format - Consolidated IRO report - Material IRO list	- Only process owner has access to plan and facilitate 9 steps in 40-60 days - Leadership team working time 6-12 hours - Stakeholders participation time 1-20 minutes - DMA process summary - Auditor can review the process with the process owner.

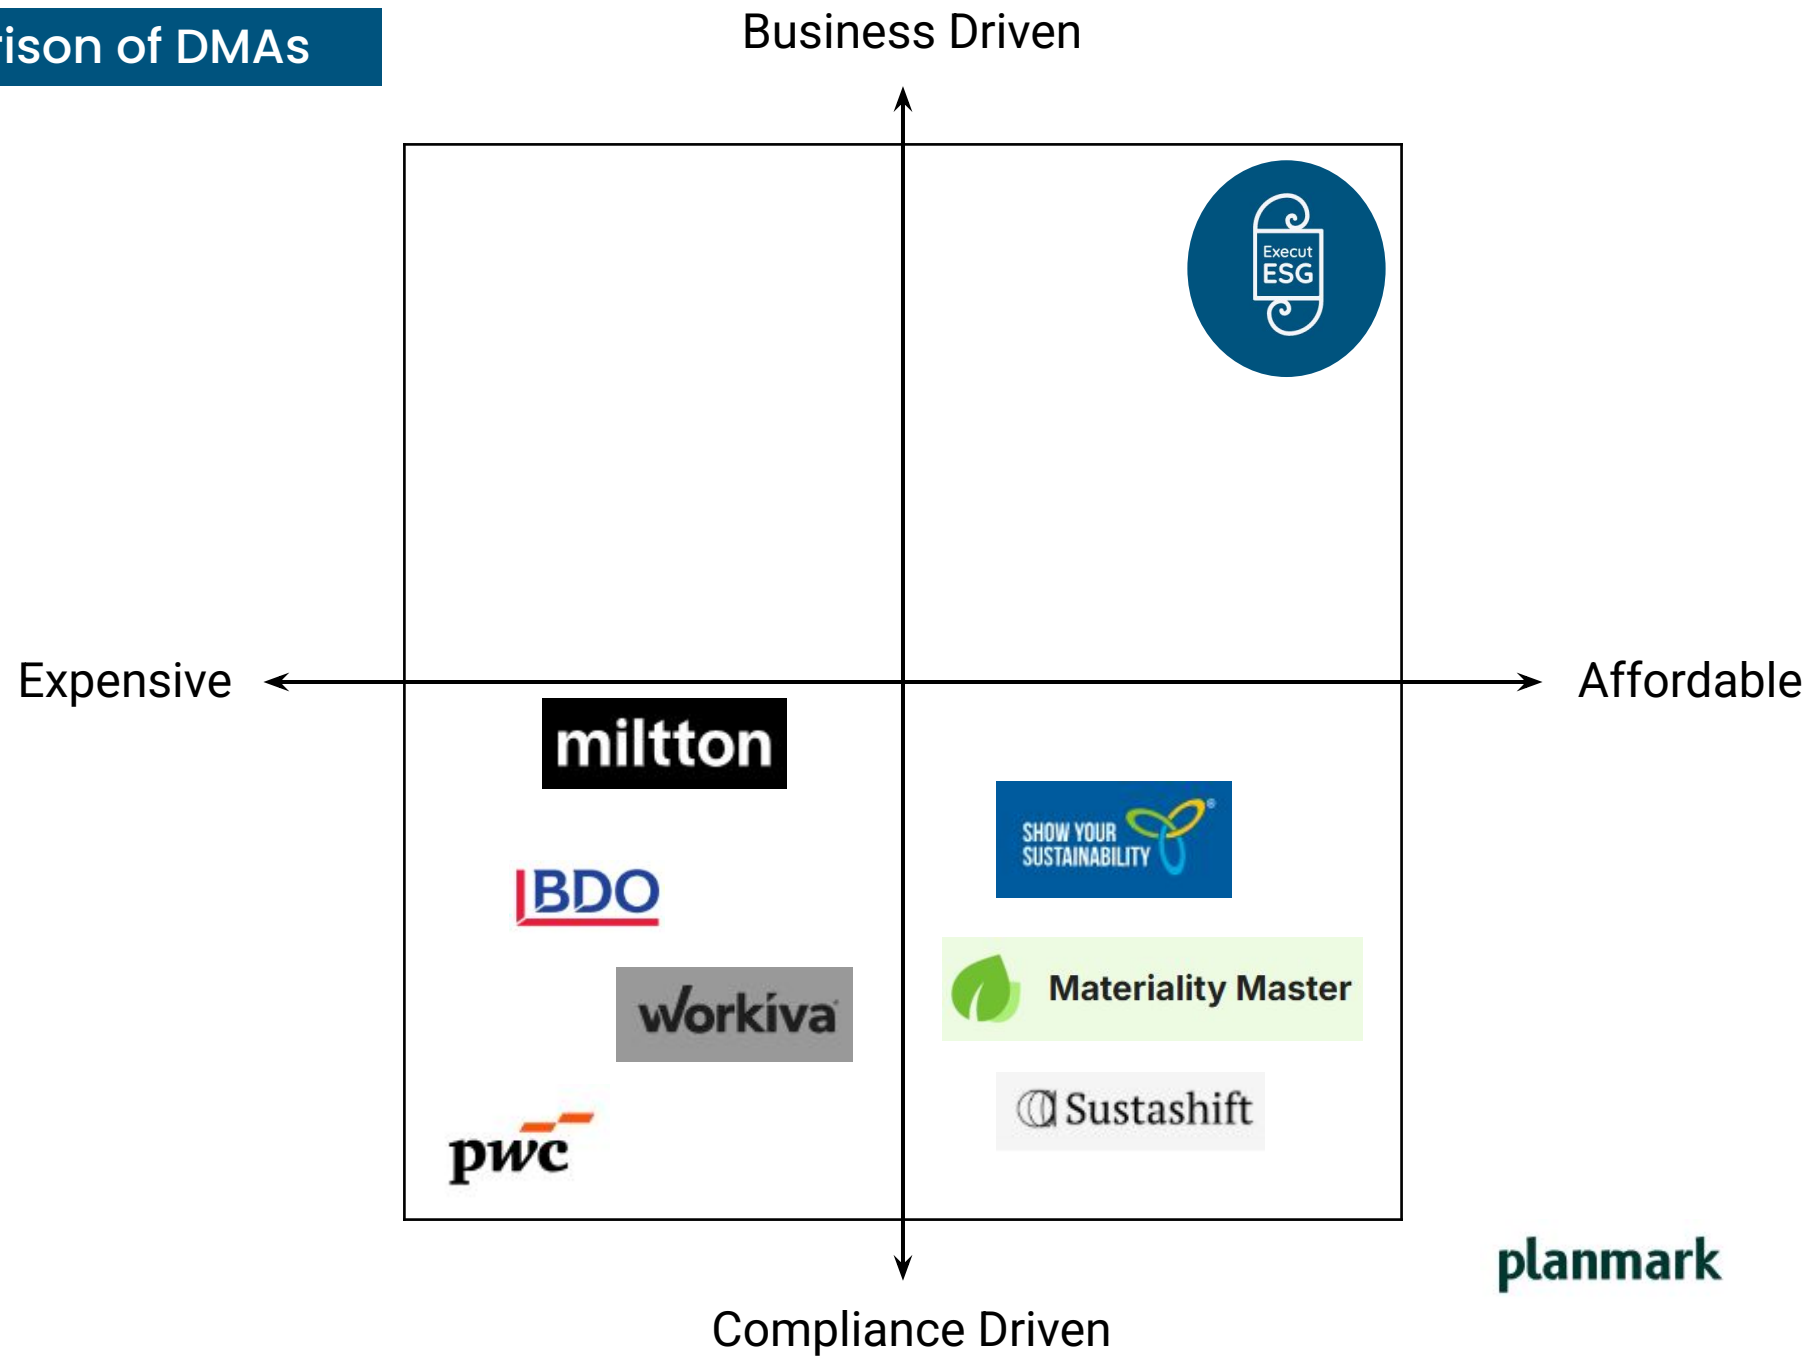

Heidi Kauppila, Veljekset Toivanen

“Working on the Double Materiality Assessment (DMA) with ExecutESG’s software is super easy, practical, and effective!

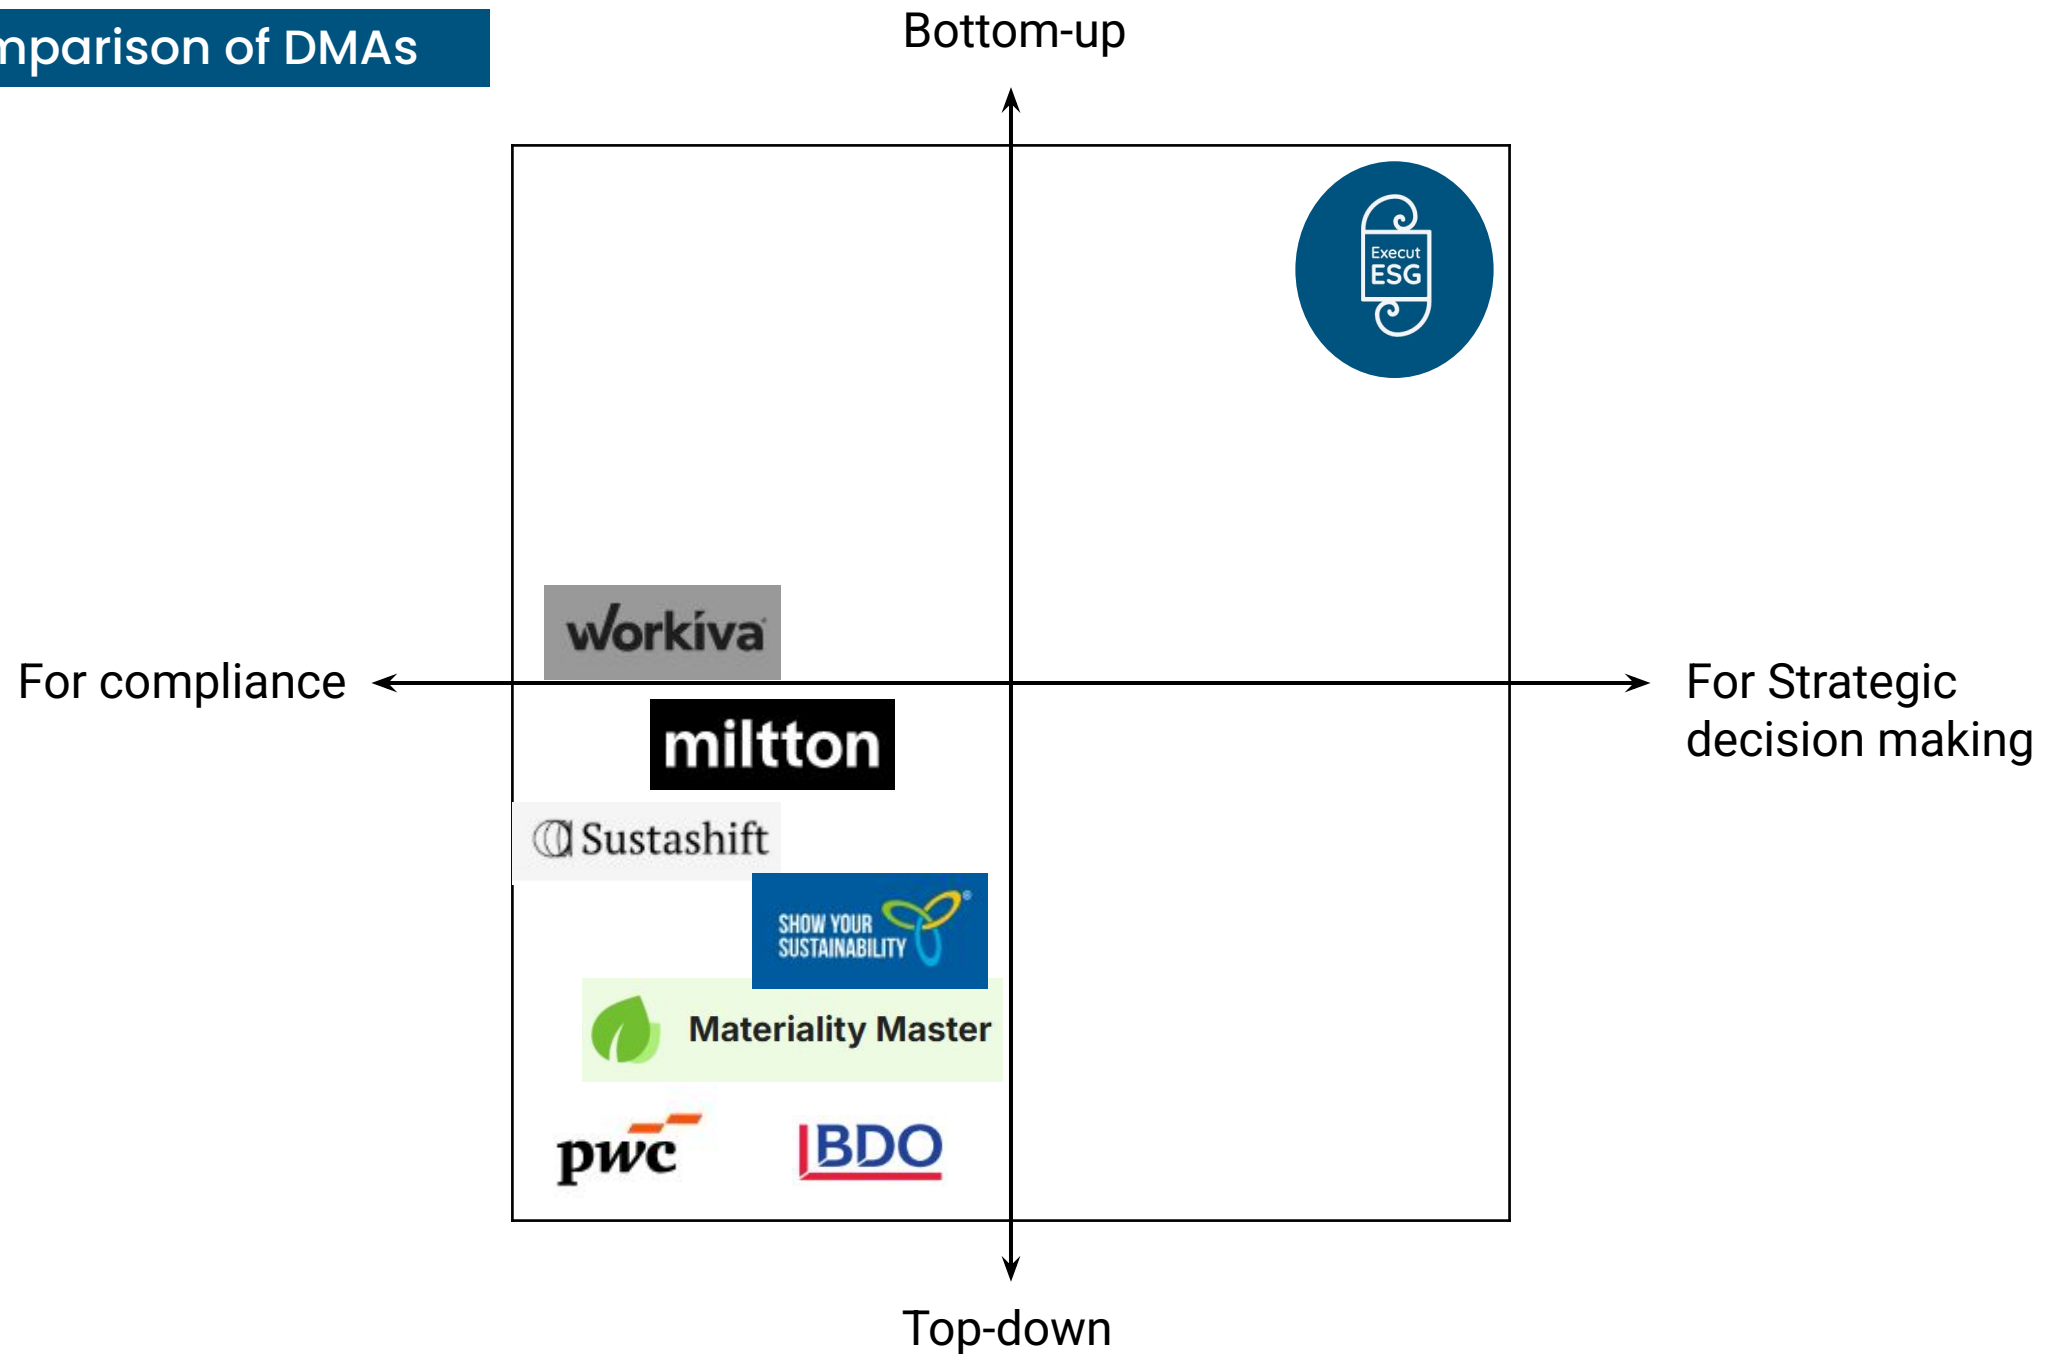

The method proceeds bottom-up — from impacts, risks, and opportunities to sustainability topics. This makes the whole picture much easier to understand and adopt compared to starting from the sustainability topics alone.”

- **Execution:** OKRs, participatory action plan, retrospectives
- **Sustainability:** SDG2030 prioritization, IRO, sustainability action plan

Taustatarina

ExecutESG was born when our founder, Jussi Simolin, recognized the growing gap between sustainability reporting and strategic leadership. Many companies were investing heavily in reporting without integrating those efforts into existing management processes. The result: siloed processes that burdened everyone, frustrated leadership, and left sustainability managers disappointed.

Our solution was to productize a unique methodology that integrates Double Materiality Assessment (DMA) directly into strategic decision-making and leadership. The approach was immediately well received. Our digitally supported DMA process is inclusive, efficient, and designed to support well-being. AI acts as our partner, taking over much of the tedious spreadsheet work. Jussi has always asked how leadership burdens in decision-making, communication, and engagement can be reduced. Our DMA process provides leadership with the insights they need for strategy and enables smooth execution in everyday operations.

Today, ExecutESG has become a trusted expert in strategic sustainability integration and a partner to leading brands in Finland. We provide cost-efficient, high-impact solutions for sustainable leadership, reporting, and especially for leveraging stakeholder insights in strategy. Our unique technology and methodology save customers significant time and resources while helping them build truly future-proof organizations.
